

# **Using Automatically Collected Data to Improve Pavement Performance Evaluation and Rehabilitation Programming**

**Li Ningyuan and Stephen Lee  
Ontario Ministry of Transportation**

**Pavement Evaluation and RPUG 2014  
Blacksburg, Virginia**

# Highlights of Presentation

- Changing Data Collection Methods at MTO
- More Objective Pavement Evaluation and Condition Assessment Reporting
- Practical Applications of the Data Collected
- Ongoing Process for Validating ARAN Outputs
- Summary and Discussions

# Changing Data Collection Methods

- Before 1970's: Manual or Visual Collection of Pavement surface distresses, rutting, riding quality data
- After 1980's:
  - ❑ PURD and ARAN to collect Riding Quality
  - ❑ Manual methods for rutting and surface distresses
- After 1990's
  - ❑ ARAN to collect Riding Quality and Rutting data
  - ❑ Manual methods for surface distresses
- After 2000's
  - ❑ ARAN to collect Riding Quality and Rutting data
  - ❑ Manual and semi-automated methods for surface distresses
- After 2010's – Fully automated/objective data collection

## FLEXIBLE PAVEMENT CONDITION EVALUATION

### AC - PAVEMENT DISTRESS TYPES

|                                  |                                     |
|----------------------------------|-------------------------------------|
| SURFACE DEFECTS                  | Ravelling and Course Aggregate Loss |
|                                  | Flushing                            |
| SURFACE DEFORMATIONS             | Rippling and Shoving                |
|                                  | Wheel Track Rutting                 |
|                                  | Distortion                          |
| LONGITUDINAL WHEEL TRACK         | Single and Multiple                 |
|                                  | Alligator                           |
| CENTRE LINE                      | Single and Multiple                 |
|                                  | Alligator                           |
| PAVEMENT EDGE                    | Single and Multiple                 |
|                                  | Alligator                           |
| TRANSVERSE                       | Half, Full and Multiple             |
|                                  | Alligator                           |
| Longitudinal Meander and Midlane |                                     |
| Random                           |                                     |

| SEVERITY OF DISTRESS |   |   |   |   | SEVERITY OF DISTRESS |   |   |   |   |
|----------------------|---|---|---|---|----------------------|---|---|---|---|
| 1                    | 2 | 3 | 4 | 5 | 1                    | 2 | 3 | 4 | 5 |
| 1                    | █ |   |   |   | 1                    | █ |   |   |   |
| 0                    |   |   |   |   | 0                    |   |   |   |   |
| 0                    |   |   |   |   | 0                    |   |   |   |   |
| 0                    |   |   |   |   | 0                    |   |   |   |   |
| 3                    |   | █ |   |   | 1                    | █ |   |   |   |
| 2                    | █ |   |   |   | 4                    |   |   | █ |   |
| 2                    | █ |   |   |   | 3                    |   | █ |   |   |
| 2                    | █ |   |   |   | 2                    | █ |   |   |   |
| 0                    |   |   |   |   | 0                    |   |   |   |   |
| 1                    | █ |   |   |   | 1                    | █ |   |   |   |

| 2                    | █ |   |   |   | 5                    |   |   |   | █ |
| 1                    | █ |   |   |   | 1                    | █ |   |   |   |
| 2                    | █ |   |   |   | 4                    |   |   | █ |   |
| 0                    |   |   |   |   | 0                    |   |   |   |   |

Re-Set All Distress To Zero

# Distress Manifestation Index (DMI)

$$DMI = \sum_{i=1}^{15} w_i (s_i + e_i)$$

- $i$  = distress type  $i$**
- $w_i$  = weighting factor assigned to distress  $i$**
- $s_i$  = severity of distress  $i$**
- $e_i$  = extent of distress  $i$**

There are about 15 individual distresses

The DMI was reported on pavement sections ranging from 500 to 500,000 meters in the past

# Current MTO ARAN/LCMS

➤ Is able to identify and report 8 individual distresses with 6 quantitative metrics at every 10 meters

➤ **Eight Individual Distresses:**

1. Midlane Single & Multiple Cracking
2. Single & Multiple Pavement Edge Cracking
3. Longitudinal Wheel Track Cracking
4. Single & Multiple Transverse Cracking
5. Centre Line Single & Multiple Cracking
6. Centre Line Alligator Cracking
7. Wheel Path Alligator Cracking
8. Alligator Pavement Edge Cracking

➤ **Quantitative Metrics**

1. Extent (m)
2. Count
3. Area (m<sup>2</sup>)
4. Length (m)
5. Width (m)
6. Transverse Extent (m)

# Distresses not be identified by ARAN

| Individual Distresses for Asphalt Concrete (AC) Pavement | ARAN/LCMS Capability |
|--|----------------------|
| Ravelling and Coarse Aggregate Loss                      | x                    |
| Flushing   | x                    |
| Rippling and Shoving                                     | x                    |
| Wheel Track Rutting                                      | ✓                    |
| Distortion   | x                    |
| Longitudinal Wheel Track: Sing. / Multi.                 | ✓                    |
| Longitudinal Wheel Track: Alligator                      | ✓                    |
| Longitudinal Meandering and Midlane                      | ✓                    |
| Transverse: Half, Full and Multiple                      | ✓                    |
| Transverse: Alligator                                    | x                    |
| Centreline: Single and Multiple                          | ✓                    |
| Centreline: Alligator                                    | ✓                    |
| Pavement Edge: Single and Multiple                       | ✓                    |
| Pavement Edge: Alligator                                 | ✓                    |
| Random/Map   | x                    |

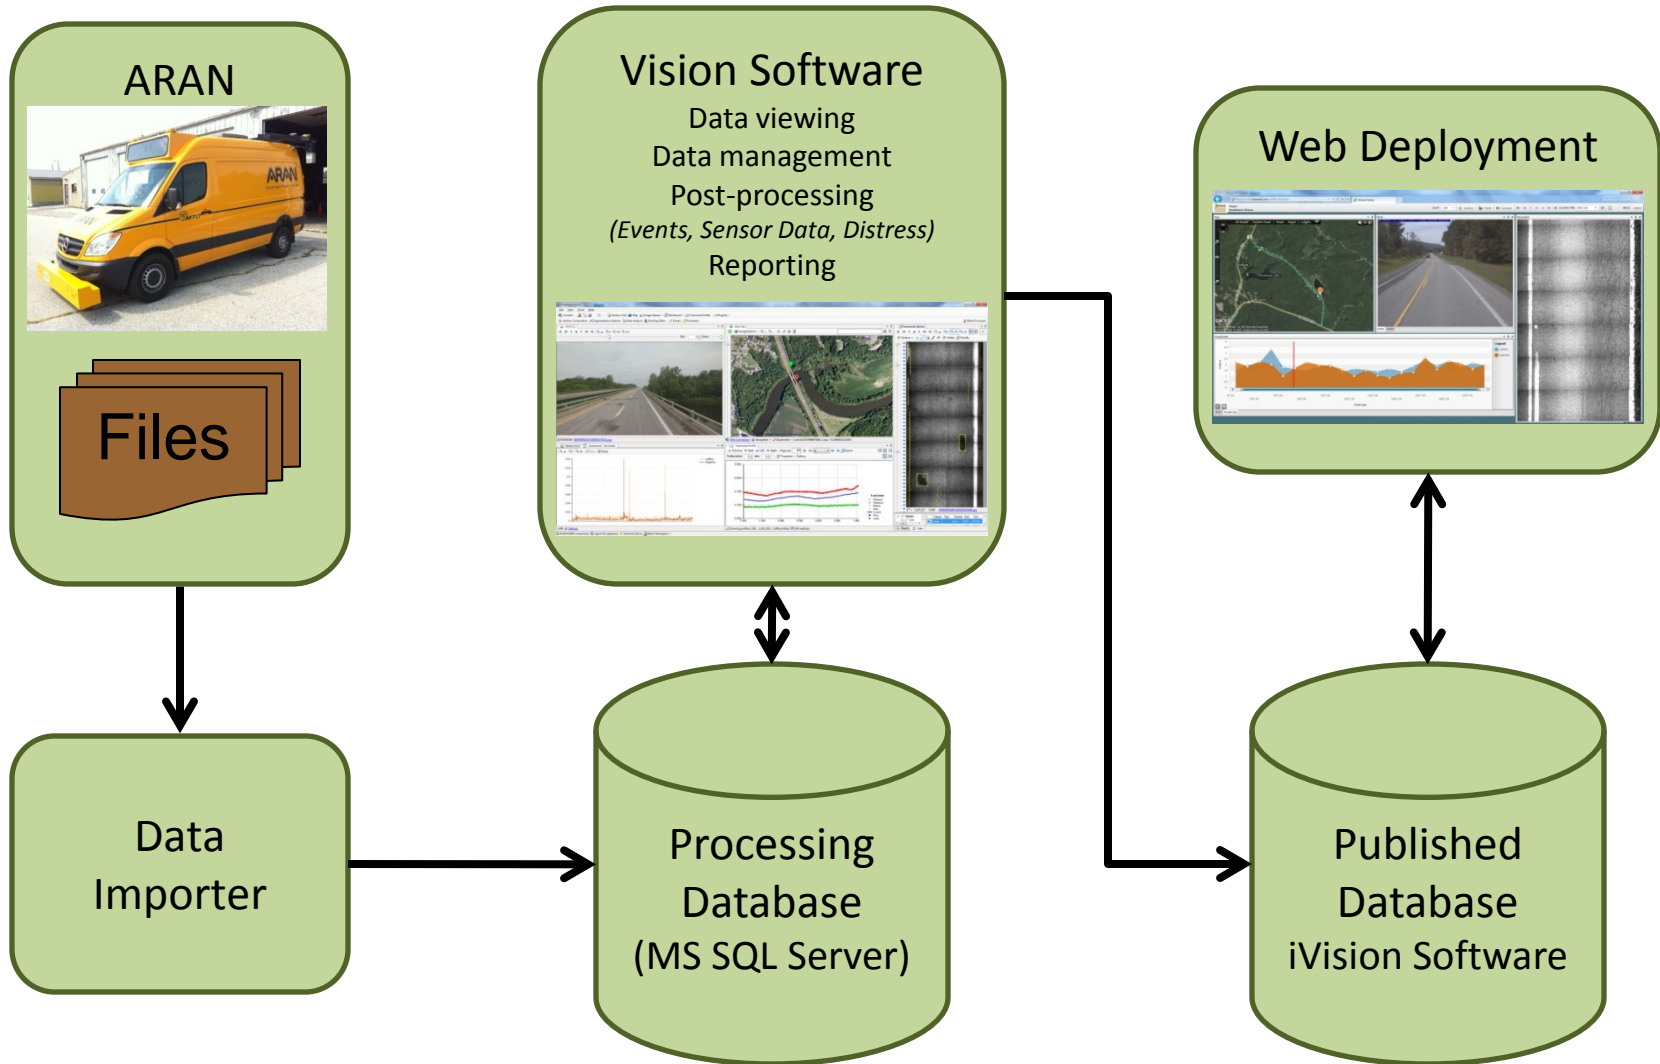

- Of the 15 individual distresses known to effect AC pavements the ARAN registers eight
- Ravelling and Course Aggregate Loss, Distortion, and Flushing have been omitted. Texture data is collected but not readily usable
- Map and random cracks are re-classified as alligator cracks
- Rutting data will be used as an independent component in PCI Calculation

# An Example of Reporting an Identified Distress by ARAN/LCMS

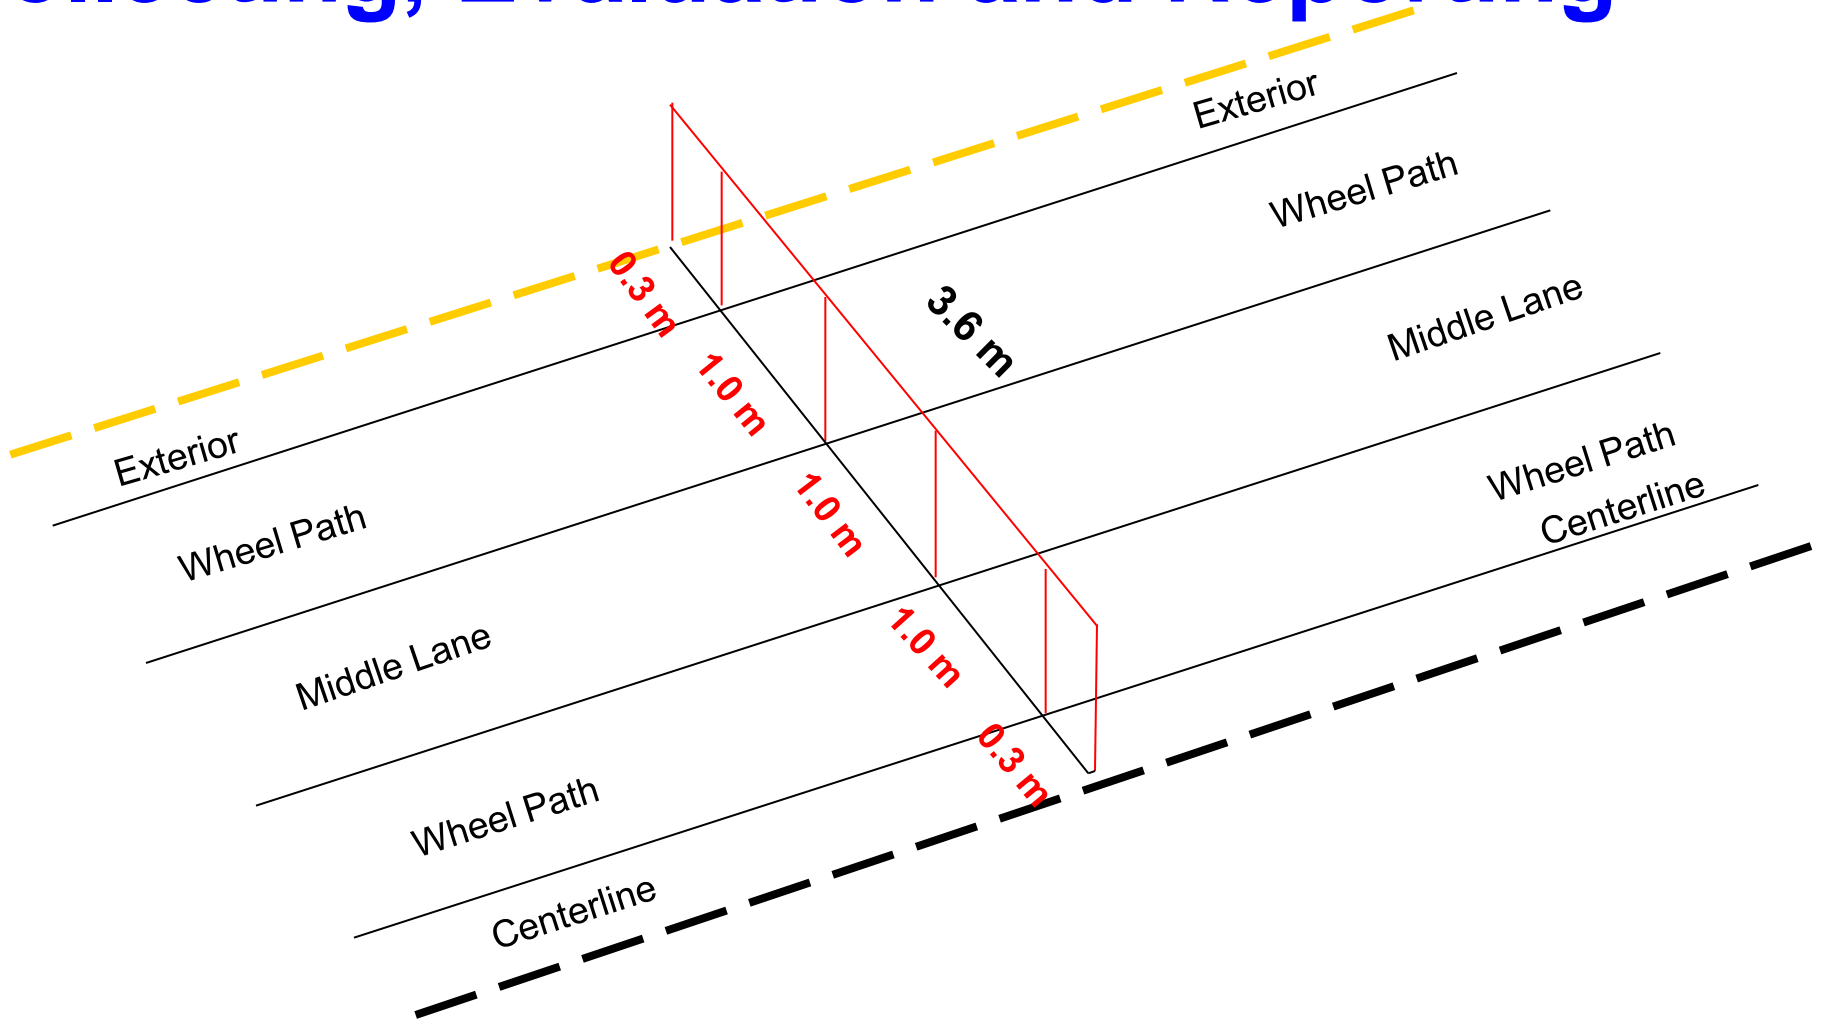

| Identification Metrics       | Slight | Moderate | Severe |
|------------------------------|--------|----------|--------|
| Count                        | 2      | 1        | 1      |
| Crack Area (m <sup>2</sup> ) | 1.59   | 1.44     | 0.23   |
| Length (m)                   | 5      | 3        | 2.5    |
| Extent (m)                   | 2.6    | 1.8      | 1.5    |
| Transverse Extent (m)        | 1      | 0.8      | 0.5    |
| Width (m)                    | 0.004  | 0.012    | 0.025  |

- When multiple cracks of the same type are evident then aggregation is applied to sum the identified distresses occurs in different severities
- Crack length and area are summed, crack width is averaged.
- Count represents the number of cracks identified. For alligator cracking, count represents the number of times the distress appears.

# MTO ARAN Data Collection and Process Workflow

# Zones Defined for Distress Data Collecting, Evaluation and Reporting

# Pavement Distress Index (DMI)

$$DMI_{long} = 100 \times \left( 1 - \frac{\sum_i^4 W(\text{LongitudinalExtent})}{4 \times \text{SectionLength}} \right)$$

$$DMI_{trans} = 100 \times \left( 1 - \frac{\sum_i^1 W_i(\text{TransverseExtent})}{3.6} \right)$$

$$DMI_{gator} = 100 \times \left( 1 - \frac{\sum_i^3 W_i(\text{AlligatorCrackArea})}{3.6 \times \text{SectionLength}} \right)$$

$$DMI = (a \times DMI_{long}) + (b \times DMI_{trans}) + (c \times DMI_{gator})$$

# Calculation of DMI Defined in MTO ARAN

- With 3 separate calculations yielding 3 DMI values for each classified DMI subcomponents, an overall DMI value is calculated in the following formula:

$$DMI = (a \times DMI_{long}) + (b \times DMI_{trans}) + (c \times DMI_{gator})$$

**(where A/B/C are factored in such as  $A + B + C = 1$ )**

- Adjustable series of a / b / c weighting factors were examined for many scenarios by using 2013 ARAN data. DMI module such as 0.40 / 0.40 / 0.20 was used for long/trans/gator cracking, and 0.80 / 1.00 / 1.00 was used for the severity distinction calculation component (slight, moderate and severe).

# Pavement Condition Index (PCI)

- A PCI value ranges from 0 to 100, with 100 representing perfect pavement condition, and 0 representing the poorest condition
- PCI is a function of IRI, DMI, RUT independent variables and it is calculated as:

$$PCI = (\alpha \times IRI) + (\beta \times DMI) + (\gamma \times RUT)$$

(where  $\alpha$ ,  $\beta$  and  $\gamma$  are coefficients such that  $\alpha + \beta + \gamma = 1$ )

- The weighting factors are analyzed to adjust PCI values in consideration of historical pavement performance values

# Overview of Formulae Developed

$$PCI = (0.70 \times IRI_{scaled}) + (0.20 \times DMI) + (0.10 \times RUT_{scaled})$$

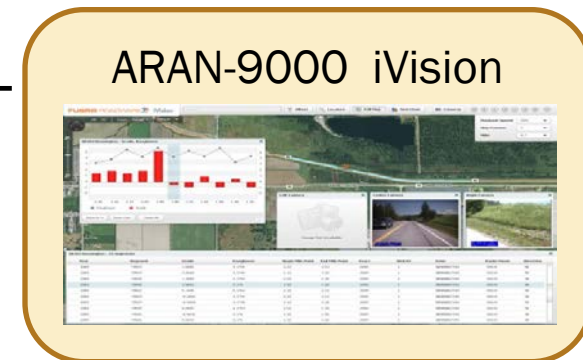

$$\hookrightarrow IRI_{scaled} = \max \left[ 0, 100 \times \left( 1 - \frac{IRI}{5} \right) \right]$$

$$\hookrightarrow DMI = \max \left[ 0, \left( (0.4 \times DMI_{long}) + (0.5 \times DMI_{trans}) + (0.1 \times DMI_{gator}) \right) \right]$$

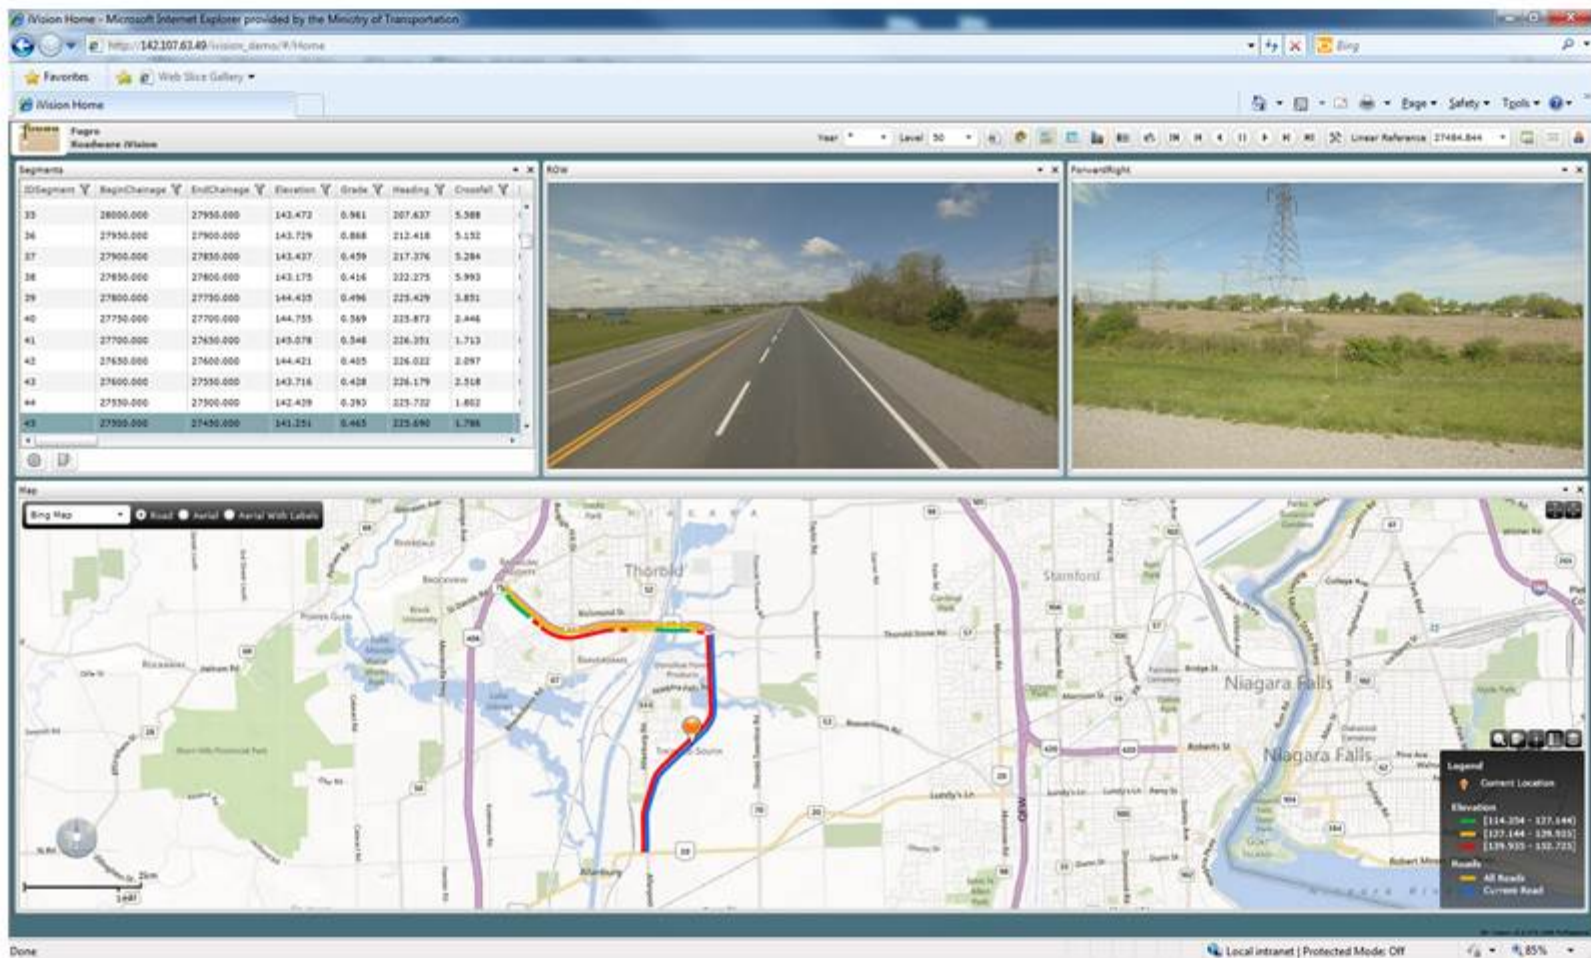

$$\hookrightarrow RUT_{scaled} = \max \left[ 0, 100 \times \left( 1 - \frac{RUT}{30} \right) \right]$$

# MTO ARAN System Functions

- High-speed collection of road location and condition data
  - Right of Way Asset Data Collection - Road Asset Management
  - Pavement Surface Profiles - IRI and RUT
  - Pavement Distresses – LCMS Integration
  - Road Location – GPS and Map
  - Performance Assessment Reporting
- Automatic Process of Integrated Pavement Location and Condition Evaluation Data – Vision Software
- Analysis Result Data Generating and Reporting – iVision Website

# Example of Web Deployment Software (iVision)

The screenshot displays the iVision software interface within a Microsoft Internet Explorer browser window. The browser address bar shows the URL: `http://142.107.63.49/iVision_demo/R/Home`. The interface is divided into several sections:

- Segments Table:** A table with columns for Segment ID, BeginChainage, EndChainage, Elevation, Grade, Heading, and Crossfall. The data is as follows:
 

| Segment | BeginChainage | EndChainage | Elevation | Grade | Heading | Crossfall |
|---------|---------------|-------------|-----------|-------|---------|-----------|
| 33      | 28000.000     | 27950.000   | 143.473   | 0.961 | 207.637 | 5.588     |
| 34      | 27950.000     | 27900.000   | 143.729   | 0.888 | 212.418 | 5.132     |
| 37      | 27900.000     | 27850.000   | 143.437   | 0.459 | 217.376 | 5.284     |
| 38      | 27850.000     | 27800.000   | 143.175   | 0.416 | 222.275 | 5.993     |
| 29      | 27800.000     | 27750.000   | 144.435   | 0.496 | 225.429 | 5.831     |
| 40      | 27750.000     | 27700.000   | 144.755   | 0.569 | 223.873 | 2.446     |
| 41      | 27700.000     | 27650.000   | 145.078   | 0.548 | 226.391 | 1.713     |
| 42      | 27650.000     | 27600.000   | 144.421   | 0.405 | 224.022 | 2.097     |
| 43      | 27600.000     | 27550.000   | 143.716   | 0.428 | 226.179 | 2.518     |
| 44      | 27500.000     | 27500.000   | 142.439   | 0.393 | 223.732 | 1.802     |
| 45      | 27500.000     | 27450.000   | 141.251   | 0.465 | 225.690 | 1.798     |
- Camera Views:** Two side-by-side camera feeds showing a perspective view of a road stretching into the distance under a clear sky.
- Map:** A Bing Map showing the geographic context of the road. A colored line (red, yellow, green) traces the path of the road segments across the map, which includes labels for Thorold and Niagara Falls.
- Legend:** A legend in the bottom right corner of the map area, titled "Elevation", showing three color-coded ranges:
  - Green: [114.304 - 127.644]
  - Yellow: [127.144 - 129.932]
  - Red: [129.933 - 132.723]
 Below the elevation legend, it also lists "Roads" with "All Roads" in blue and "Current Road" in red.

# Data Collection Applications

## ➤ Before 2013

- ❑ Pavement management at network Level (for projects planning and budgeting)
- ❑ Data summarized and reported by pre-defined sections (ranging from 500 meters to 500,000 meters)

## ➤ After 2013

- ❑ Pavement management at network Level
- ❑ Data Accessed by MTO Functional Offices or Users via iVision Web-browser Program (project level)
- ❑ Management of 7 Year Performance-based maintenance contracts (Maintenance and Rehabilitation Programs)
- ❑ **Data summarized and reported by 50 meters**

# Pavement Performance Reporting

1. All individual distresses and performance indices (IRI, DMI, RUT and PCI) are to be reported in 50 meter intervals
2. All individual distresses and performance indices (IRI, DMI, RUT and PCI) are to be reported in every 500 meters for warranty projects
3. All individual distresses and performance indices will be monitored and reported in 150 meters to manage performance-based long-term maintenance contracts

# IRI at 50m per Section

## IRI at 500m per Section

## IRI at 3000m per Section

## IRI at 10000m per Section

# Data Validation Testing Sites

- Patrol yard used to verify and validate individual distresses reported manually vs ARAN/LCMS
- Highway used to compare evaluation report on Rutting and individual distresses
- Artificial Saw-cut cracks used to verify distress classification and evaluation reporting

## Ruts Measured on Right and Left Wheel Paths

| Right (ARAN) | Manual      | Left (ARAN) | Manual      |
|--------------|-------------|-------------|-------------|
| 3.99         | X           | 2.26        | X           |

| 4.09         | <b>4.00</b> | 2.34        | <b>3.00</b> |
| 4.94         | <b>3.00</b> | 2.37        | <b>3.00</b> |
| 4.46         | <b>4.00</b> | 2.76        | <b>3.00</b> |

# Summary of MTO Data Collection

- Moving towards fully automated data collection and evaluation of pavement conditions at network level
- More objective assessment of pavement condition indexes (IRI, DMI, RDI, PCI) becomes available for pavement management
- Extended applications to manage quality of performance-based long-term pavement maintenance contracts
- Improving maintenance and rehabilitation (M&R) treatments programming and investment planning in more reliable, expeditious and cost-effective manner
