Responsible for Transportation and Highway Safety

Seventh International Symposium on Naturalistic Driving Research
NDRS 2018

Blacksburg, Virginia, August 28-30, 2018

Canada

OVERVIEW

- The Motivation for the Canadian Naturalistic Driving Study
- The Data:
 - Overview comparing Canada & US
 - Major crash types & Contributing Factors
 - Weather

MOTIVATION: CANADIAN NATURALISTIC DRIVING STUDY

- SHRP2 provided an opportunity to work with the US on a NDS
- Canadian project benefits greatly from all the work done in SHRP2
- Data from both Canada & US are valuable due to our shared interests in road safety

MOTIVATION: CANADIAN NATURALISTIC DRIVING STUDY

Why Saskatoon, Saskatchewan, Canada?

- Urban / Rural highways
- Winter conditions
- Relatively high mileage drivers
- Data: prevalence of risky behaviors
- Opportunity for truck data
- Cooperation among levels of gov't, provincial insurers, University of Saskatchewan, CODMT, VTTI & others

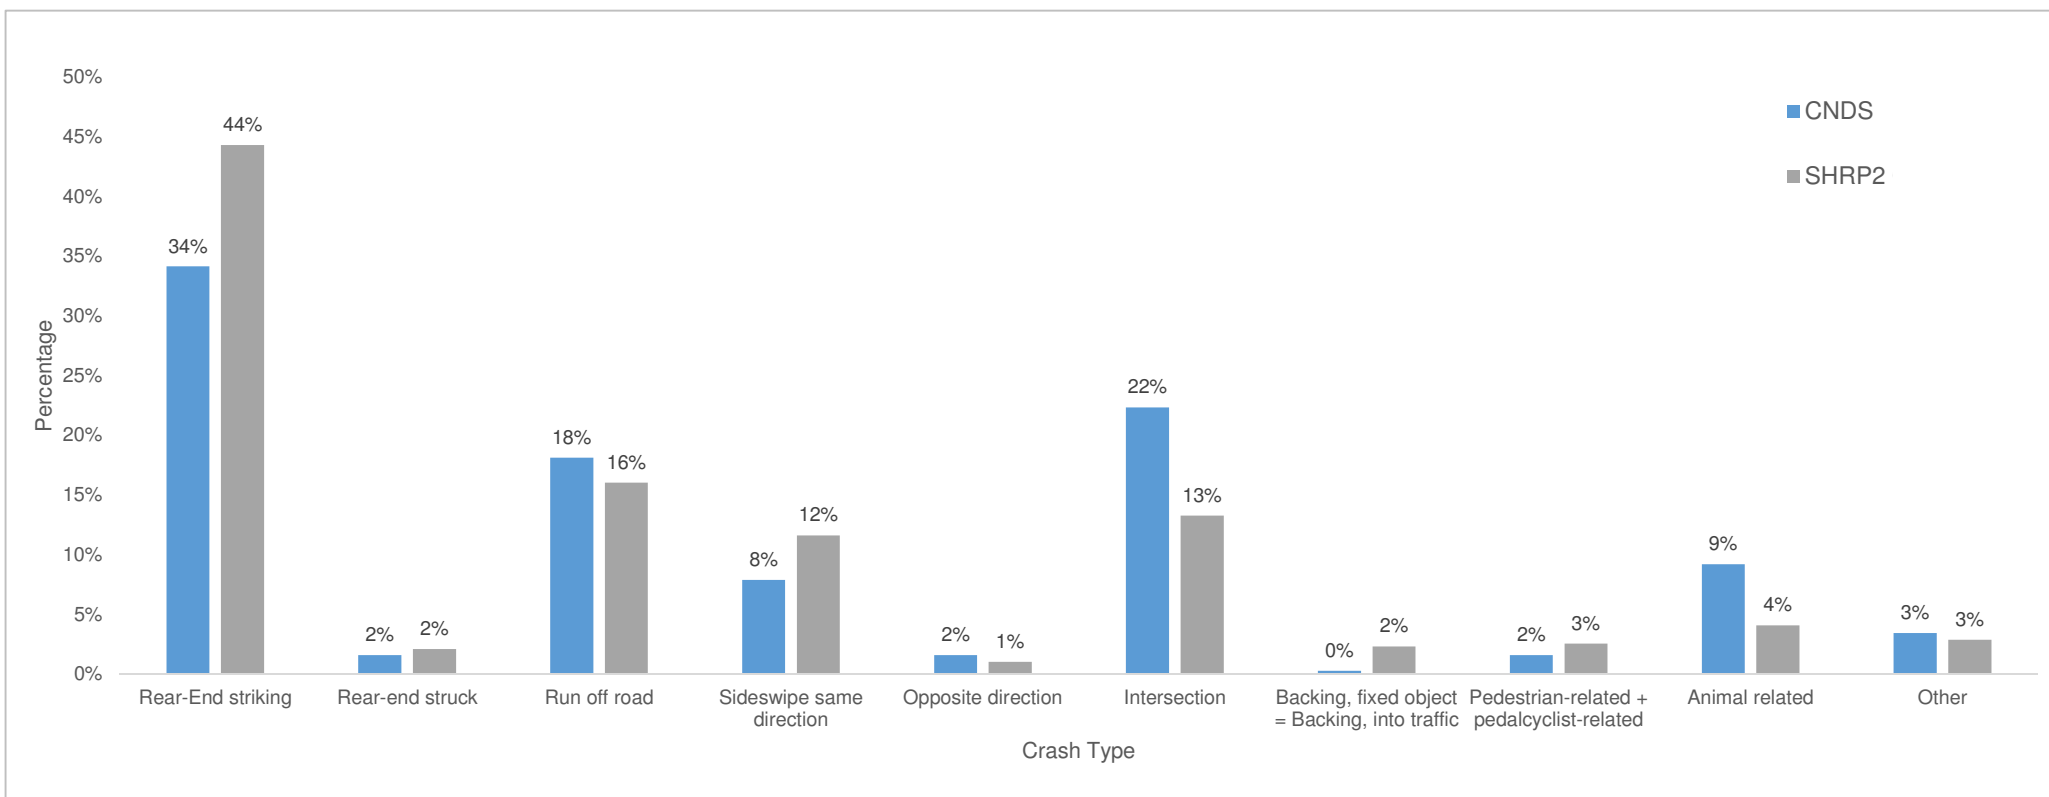

HOW DO THE 2 DATA SETS COMPARE?

1. Comparison of CNDS & SHRP2 data:

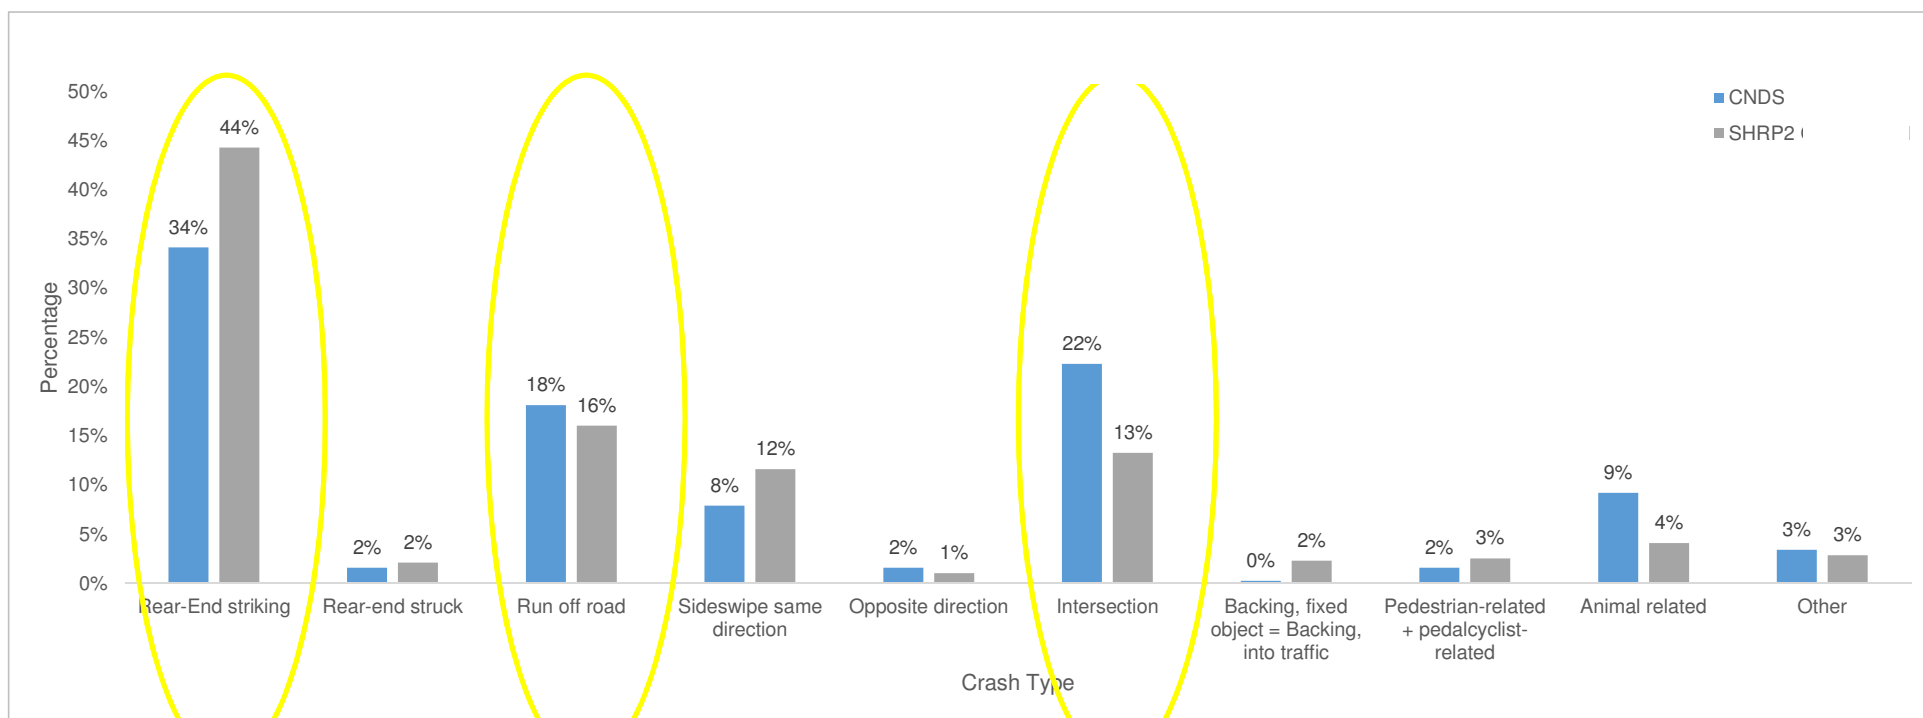

- Combined crash & near crash
- 10 crash categories
- % of each crash type for each NDS set

CRASH TYPES: CNDS & SHRP2 (C/NC)

CRASH TYPES: US & CDN DATA

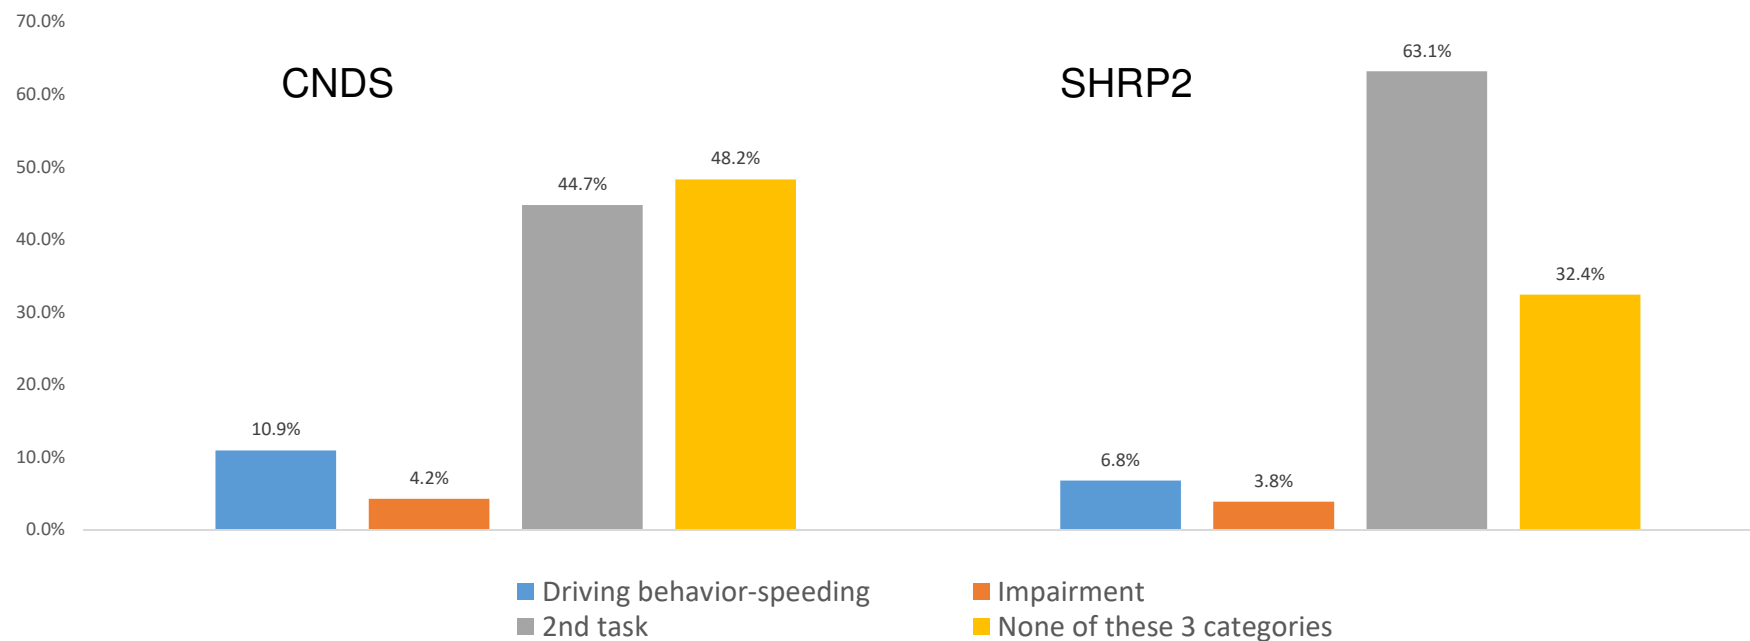

HOW DO THE 2 DATA SETS COMPARE?

2. Combine 3 main crash types: Rear End, RoR, Intersection

➤ Contributing factors:

- Speeding
- Impairment
- Secondary task
- Other

CONTRIBUTING BEHAVIORS IN CRASHES

HOW DO THE 2 DATA SETS COMPARE?

3. Weather

- Snowy & icy conditions

SNOWY/ICY ROAD SURFACE CONDITIONS

Comparison of Snowy/icy based on road surface condition CNC (CNDS vs. SHRP2)

CNDS 23.1%
SHRP2 1.8%

402758

CONCLUSIONS

- Real value: Compare, contrast & combining NDS data sets
- Use with other data types, observational studies, infrastructure, etc
- Ask questions of data to get answers not previously possible
- Opportunities:
 - What can we learn from other countries?
 - What can we learn about crash countermeasures?
 - What can we learn about typical driving?
 - What can we learn that is useful for AV/CV development?
 -
